ABSTRACT

As part of a student flow project designed to monitor the progress of students who entered Kapiolani Community College (KCC) in Fall 1980 for five consecutive semesters, a survey was conducted of the 753 Fall 1980 entering students who did not re-enroll in Spring 1981. The survey instrument asked respondents to: (1) indicate their main reason for not returning to KCC; (2) specify their current activities: and (3) rate their degree of satisfaction with their experiences at KCC in terms of instruction, faculty-student relations, course availability, intellectual environment, orientation, counseling services, financial aid, student employment services, friendships with other students, and facilities and equipment. Major findings, based on a 29% response rate, reveal that the reason most often cited for leaving was "transferred to another school" (cited by 18.7% of the respondents), followed by "preferred to work" (cited by 16.8% of the respondents). Most of the respondents (65.7%) were working, and 20% were attending another school. While the majority rated each of the specified college experiences highly, 42% were not satisfied with the variety of courses available. The study report discusses methodology, examines the representativeness of the sample, and details findings by program area. In addition, it compares the KCC ratings of returning and non-returning students and contrasts data with the findings of a Fall 1975 study, (JP)

A. Introduction

The Student Flow Program includes plans for the administration of a Non-Continuing Student Survey each semester, Spring 1981 through Spring 1983, to non-continuing students who entered Kapiolani Community College in Fall 1980.

1. Purposes

There were three basic purposes for undertaking the Spring 1981 Non-Continuing Student Survey:

- a. to find out why students, after one semester, did not continue at KCC
- b. to find out what these students are doing in Spring 1981 (current activities)
- c. to give these students an opportunity to evaluate their experience at KCC and to offer suggestions for improving the college.

2. Plan for Analysis

Since the non-continuing students were to be contacted by mail, we hoped for a return rate between 30 and 40 percent.

Our plans for analysis included (a) tests of representativeness, i.e., comparing respondents and non-respondents on the following characteristics: sex, age, major program, enrollment status (full- or part-time), cumulative GPA, cumulative CCR, Fall 1980 entry status (new or transfer), math placement test scores, and English placement test scores; (b) cross tabulations of responses to survey items by program and any of the above characteristics on which respondents are representative of the total. Chi-square analysis was to be applied through the use of the Statistical Package for the Social Sciences (SPSS). However, the results of such analysis are ignored if 25 percent or more of the valid cells have expected frequencies less than five.

After being processed by the institutional research staff, the surveys, without identifying information, would be distributed to administrative personnel (including department chairmen). It was hoped that these individuals would find the comments of special interest.

3. Conduct of the Survey

From the preliminary (3rd week) registration data on the Fall 1980 entering group, ron-continuing students were identified and labels were printed by personnel working on KCC's student flow project.

On the afternoon of February 26, surveys and stamped, self-addressed return envelopes were mailed to non-continuing students. We urged them to complete and return their questionnaires as soon as possible.

In order to maximize the number of returns, a decision was made very early in the planning process to contact as many non-continuing students as possible. This follow-up would be a phone call during the evening hours (between 6 and 8 p.m.) beginning the week after the surveys were mailed. In order to facilitate processing, responses, if possible, would be taken over the phone.

4. Organization of this Report

The remainder of this report contains a discussion of each of the following:

- rate and representativeness of returns
- summary of findings
- concluding comments

While responses to the items in the survey (see Appendix A for a copy) are summarized in the section on findings, the appendices include additional details, by program, for the sub-questions which were posed in an attempt to obtain more detailed information.

B. The Returns

Percentage of Returns

At the time of cut off, 215 surveys (of 753 mailed) were completed for a return rate of 29 percent (Table 1). By program, the return rates ranged from public services (45%) to food services/hoper (24%). Worthy of note is the fact that the one student helper assigned to make the follow-up calls was not able to reach all non-respondents by the cut-off date.

Table 1

RATE OF RETURNS, BY PROGRAM
NON-CONTINUING STUDENT SURVEY
KAPIOLANI COMMUNITY COLLEGE
SPRING 1981

	Non-	RESPONSES					
Program	Continuing	1 '	to 3/6	1 1	to 3/27	1	tala
	Students	N	H#.	N	H%	N	H%
Total	753	120	16	95	13	215	29

Public Services	11	5	45	-	-	5	45
Unclassified	131	27	21	23	18	50	38

aRecords on the follow-up phone calls indicate we failed to contact students because: we had incorrect phone numbers for 72 students; we were unable to contact 194 students by phone; and we did not complete follow-up calls to 173 students. Furthermore, no responses were received from 67 students for whom messages were left or who indicated that they would send in their surveys.

2. Representativeness of Respondents

.,

Data on the representativeness of returns are found in Table 2. Respondents did not differ significantly from non-respondents on six characteristics: major program, Fall 1980 entry status (new or transfer), enrollment status (full- or part-time), math and English placement test scores, and cumulative GPA.

3.5 & above 3.0-3.4 2.0-2.9 Below 2.0 CUM CCR*** 1.00 0.80-0.99 0.50-0.79 Below 0.50	13 2.4 30 5.5 16 2.9 491 89.3 232 36.3 16 2.5 70 10.9 322 50.3	2 11 6 142 92 3 26 64	1.2 6.8 3.7 88.2 49.7 1.6 14.1 34.6	11 19 10 349 140 13 44 258	2.8 4.9 2.6 89.7 30.8 2.9 9.7 56.7

^aLevels of significance, based upon chi-square analysis, are denoted thus: * .05, ** .01, *** .001.

Lower proportions of the following groups were found among the respondents than among non-respondents:

- males (31% vs 42%)
- students 19-21 years at entry (23% vs 31%)
- students with Fall 1980 CCRs of below 0.50 (35% vs 57%)

The data also show that the numbers of respondents from non-continuers in health services (6) and public services (5) represent approximately 5 percent of the total respondents. This should be borne in mind while interpreting the results presented in the next section. Because of these low numbers, no reference will be made to the responses of health and public services "dropouts."

C. The Findings

The results of the Spring 1981 Non-Centinging Student Survey are presented, by program, in three sections and the appendices. The first section deals with reasons why Fall 1980 entering students did not continue in Spring 1981; the second section with current activities of these non-continuing students; and the third with evaluations of their KCC experience.1

1. Main Reasons for Not Continuing in Spring 1981

The first item in the Spring 1981 Mon-Continuing Student Survey asked respondents to indicate the "main reason (check one) for not registering this semester at KCC." The results, by program, are given in Table 3.

Results by entry status, empliment status and cumulative GPA are on file in the institutional research unit. Results by math and English placement test acores were not run due to the large numbers (over 300) who had no placement cores. Campus personnel interested in these data are encoured to contact the staff working on KCC's student flow project.

2. Current Activities

N.

The second item in the survey was designed to determine what the current (Spring 1981) activities of the non-continuing students are. Respondents were asked to "check the one which best describes present activity." The results in Table 4 show that two-thirds of the respondents are working and a fifth are attending another educational institution.

TABLE 4

19 OUT OF 24 (62.5%) OF THE VALID CELLS HAVE EXPECTED CELL FREQUENCY LESS THAN 5.0. MINIMUM EXPECTED CELL FREQUENCY = 0.310 PAW CHI SQUARE = 60.93469 WITH 15 DEGREES OF FREEDOM. SIGNIFICANCE = 0.0000 NUMBER OF MISSING OBSERVATIONS = 5

Especially high proportions of unclassified s ents (43, 86%) are working, while liberal arts majors (28, 34 are attending another school. (See Appendices C and D for further details.)

There was a statistically significant difference on current activity among respondents by enrollment status: more part- than full-time students are working (71% vs 52%); more full- than part-time students are attending another school (33% vs 16%). However, there were no significant differences regarding details on work or on attendance at another college.

The data in Table 3 show that four (of nine) reasons were selected by approximately equivalent proportions of ron-continuing students: transferred to another school (19%), preferred to work (17%), found desired course(s) unavailable (15%).

Respondents selecting one of two reasons for not continuing were given the additional opportunity to be more specific about why they: transferred to another school and found desired course(s) unavailable. Although data on these sub-questions are included in Appendix B, the number of respondents (34 and 28, respectively) are low, so generalizations should not be drawn.

²Of forty respondents who indicated "other," several (11, 28%) specified reasons related to registration such as: missed deadline, didn't know when registration was, poor communication about next semester's schedule.

³The data show no statistically significant differences among the responses by entry status, enrollment status and cumulative GPA.

9

Highlights of the data in Appendix C include the following:

- most of the non-continuing students who are working provided additional data: close to three-fourths (98) are working "full-time"; about one-half (64) are working in jobs "not related" to their community college studies; more than two-thirds (88) "intend to continue" in their jobs.
- at least one-fourth of the non-continuing students are working in clerical jobs (41, 29%) and service occupations, including food and beverage positions (35, 25%); close to one-fifth (24, 17%) have jobs in marketing/sales.

Highlights of the data in Appendix D include the following:

- of non-continuers attending another school: close to two-thirds (24, 65%) were enrolled full-time; and the large majority of those attending a 4-year institution (10, 71%) were able to transfer all their 100-level courses.
- one-third (14) of the non-continuers were attending UH Manoa; another fourth (10) were enrolled at Honolulu CC.
- nearly two-thirds did not indicate a current major or named one not offered at KCC; approximately one-fourth transferred into a Liberal Arts program (10, 24%).

3. Evaluation of KCC Experience

A total of eleven items in the third section of the survey dealt with the general KCC experience. Responses are summarized below in percentages:

		Total Responses	Not <u>Satisfied</u>	Satisfied	Very Satisfied
Sect	cion III Items	·			
1.	Instruction	198	16%	52%	32%
2.	Faculty/student relations	196	12%	53%	35%
3.	Variety of courses you could take	198	42%	41%	17%
4.	Intellectual environment	194	23%	58%	19%
5.	Orientation	183	20%	60%	20%
6.	Counseling/academic advising	168	32%	49%	19%
7.	Financial aid services	121	12%	72%	17%
8.	Student employment services	117	17%	61%	22%
9.	Friendship with other students	184	9%	48%	43%
10.	Facilities/equipment	182	24%	54%	23%
11.	Total experience at college	195	· 18%	52%	29%

The above data show that:

- most of the respondents (at least 182 of a total 215) evaluated each item except "financial aid services" and "student employment services."
- the great majority, ranging from 91 percent (friendship with other students) to 68 percent (counseling/academic advising), rated nine of the eleven items satisfactory or better.

- more than one-fourth of the respondents were very satisfied regarding: friendship with other students (43%), faculty/student relations (35%), instruction (32%), and total college experience (29%).
- close to a half of the respondents were not satisfied with variety of courses (42%) and about one-third with counseling/academic advising.

Details, by program, are included in Appendix E. 5

D. Summary and Concluding Comments

Despite the low rate of return, the statistics presented in this report should provide campus personnel with useful data for their efforts in planning and evaluating programs and services.

1. Profile of Respondents

In general, respondents to the Spring 1981 Non-Continuing Student Survey were:

- 40% liberal arts majors; business, 21%
- 69% females
- below 19 years at entry; 19-21 years and over 29 years, 23% each
- 66% new students
- 74% part-time students
- 65% students recommended to Math 1 or Math 24
- 88% students with below 2.0 GPA after 1 semester
- 50% students with 1.00 CCR; below 0.50, 35%

These non-continuers indicated several main reasons for not continuing in Spring 1981: they were working (67%) or attending another school (20%).

Spenses on the evaluation of the KCC experience by enrollment status and cumulative GPA show no significant differences. By entry status, responses differed for three of the items: intellectual environment, facilities/equipment and total college experience. In general, more than four-fifths of the new students (84%, 81%, 83%, respectively) were satisfied or very satisfied with these areas, while approximately one-third of the transfers were not satisfied (36%, 32%, 22%, respectively).

2. Comparisons of Responses from Continuing and Non-Continuing Students

Comparisons of data related to the evaluation of the college experience are undertaken with caution due to the low rate of return for the Spring 1981 Non-Continuing Student Survey (29%) as compared to that of the Spring 1981 Continuing Student Survey (69%).

Both Spring 1981 surveys, Continuing Student Survey (CSS) and Non-Continuing Student Survey (NCSS), contained the same eleven items related to the KCC experience. Summarized below is a comparison of the responses of Fall 1980 entering students who continued in Spring 1981 with those who did not continue in that semester:

		Total Responses	Not Satisfied	<u>Satisfied</u>	Very Satisfied
ксс	Experience				
1.	Instruction CSS NCSS	1,019 198	7% 16%	69% 52%	24% 32%
2.	Faculty/student relations CSS "ICSS	_ ,	9% 12%	66% 53%	25% 35%
3.	Variety of courses you could take CSS NCSS	1,000 198	30% 42%	52% 41%	18% 17%
4.	Intellectual environment CSS NCSS	993 194	14% 23%	72% 58%	14%` 19%
5.	Orientation CSS NCSS	993 183	13 % 20%	71% 60%	17% 20%
6.	Counseling/academic advising CSS NCSS	974 168	16% 32%	62% 49%	22% 1 9 %
7.	Financial aid services CSS NCSS	871 121	10% 12%	69% 72%	21% 17%

			Total Responses	Not Satisfied	Satisfied	Very <u>Satisfied</u>
ксс	Experience (continued)					
8.	Student employment services	CSS NCSS	852 117	11% 17%	70% 61%	20% 22%
9.	Friendship with other students	CSS NCSS	985 184	5% 9%	57% 48%	38% 43%
10.	Facilities/equipment	CSS NCSS	960 182	19% 24%	63% 54%	18% 23%
11.	Total experience at college	CSS NCSS	982 195	9% 18%	63% 52%	28% 29%

The comparative data show that non-continuing students appeared to have more intense sentiments than continuing students in evaluating their KCC experience:

- in all but three areas (variety of courses you could take, counseling/academic advising, financial aid services), higher proportions of non-continuing students were very satisfied with their KCC experiences. Differences were greatest for: faculty/student relations (35% for non-continuing students vs 25% for continuing students) and instruction (32% vs 24%, respectively).
- in all eleven areas, higher proportions of noncontinuers, compared to continuers, were not
 satisfied with their KCC experiences. Greatest
 differences occurred in the following areas:
 counseling/academic advising (32% for noncontinuing students vs 16% for continuing
 students) and variety of courses you could
 take (42% vs 30%, respectively).

3. Comparisons of Fall 1980 and Fall 1975 Non-Continuing Students (after one semester)

A non-continuing student survey, which included KCC in the population, was conducted in Spring 1976 by the Office of the Chancellor for Community Colleges. 6 While that instrument differed considerably from KCC's Spring 1981 Non-Continuing Student Survey, the following limited comparisons are possible:

	Fall 1980 ES	Fall 1975 ES
Reasons for Not Continuing After 1 Semester Transferred to another school Other Preferred to work Desired course(s) unavailable	21 4 19% 19% 17% 15%	231 17%7 23%7 25% 18%
Current Activities Working Attending another school Looking for work Other	210 67% 20% 7% 6%	227 58% 19% 9% 13%

Office of the Chancellor for Community Colleges, "Fall 1975 Entering Students Not Continuing in the Same Community College in Spring 1976," SFP Report No. 9, April 1976.

ERIC

4 4

⁷The Spring 1976 survey listed fewer reasons for not continuing. This may, in part, account for the higher proportion of respondents who selected "other" in Spring 1976.

⁸Liberal Arts majors (78% and 72%, respectively) generally felt that there was no relationship between work and their community college studies.

In most instances, non-continuing students who dropped out after one semester in Spring 1981 and Spring 1976 were quite similar in the responses which represented majority or plurality opinion. For example, most were working (67% for Spring 1981 and 58% for Spring 1976), full-time (73% and 63%, respectively), in clerical/sales positions (46% and 50%, respectively) and in jobs closely or somewhat related to their community college studies (51% and 56%, respectively).

4. Concluding Comments

An examination of the data in this report reveals that close to 90 percent of the Fall 1980 entering students who did not continue in Spring 1981 are either working (67%) or attending another school (20%). These results show a very high degree of constructive activity among the non-continuers and also indicate that there is no one stereotype of the "dropout."

However, there is concern about the 15 percent of the respondents who indicated that their main reason for not continuing was "found desired course(s) unavailable." As planning for the class schedule and registration is undertaken, perhaps questions such as the following should be explored in an attempt to measure progress/improvement in this area: To what extent can the college improve course/section availability to all students? To what extent is early registration (first pilot tested Spring 1981) helping to satisfy student needs? to identify course/section shortages?

Although the return rate for the Spring 1981 Non-Continuing Student Survey was rather low, the data, used in conjunction with data from earlier surveys provide campus personnel with indicators of how student populations are changing and of areas in which campus improvements or revisions might be undertaken. Note, for example, the specific areas in which continuing students and "dropouts" evaluate their KCC experience quite differently. The more intense feelings of the latter group should not go unheeded.

APPENDIX

APPENDIX A

NON-CONTINUING STUDENT SURVEY KAPIOLANI COMMUNITY COLLEGE SPRING 1981

. Aloha!

Will you take a few minutes to complete the enclosed questionnaire? The information will help us improve programs and services for our students.

Your questionnaire has a label on it to make it easy for us to summarize the characteristics of respondents on a group basis. Responses are confidential and <u>not</u> reported for specific individuals.

A stamped, self-addressed envelope is enclosed for your convenience. Please respond as soon as possible. If we do not hear from you soon, we may need to follow-up with another request. If you have any questions, please call 735-3131. Thank you very much for your cooperation and help.

Juge S. Jaccach

Joyce S. Tsunoda, Provost
